SUMMARY

Computer Science undergraduate skilled in Python, SQL, REST APIs, Machine Learning, and AWS cloud fundamentals. Built and deployed 3 full-stack ML/web applications end-to-end with authentication, database integration, and API testing.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering **2023 - Present**

Babu Banarasi Das University, Lucknow

TECHNICAL SKILLS

Languages:	Python, Java (Basics), SQL (PostgreSQL, SQLite)
Frameworks & APIs:	Flask, FastAPI, REST APIs, OAuth 2.0, JWT, WebSockets
ML & Data:	scikit-learn, Pandas, NumPy, LSTM, Linear Regression, Random Forest
Cloud & Databases:	AWS (Cloud Computing Fundamentals), MongoDB, SQLite, Render, Vercel, Twilio API
Tools:	Git, GitHub, VS Code, Postman, Technical Documentation, Agile Methodology
Core CS:	Data Structures & Algorithms, Object-Oriented Programming, Software Testing
Languages:	English, Hindi

EXPERIENCE

AWS & Cloud Computing Summer Trainee **22 Jun 2026 - 05 Aug 2026**

GRAStech (Learnovate), BBD Campus, Lucknow

- Completed a 90-hour project-based summer training program on AWS and Cloud Computing, an ISO 9001:2015 certified program (Cert. No. GRAS/PBT/AWS/068).
- Gained hands-on experience with cloud computing concepts and AWS services through project-based learning, complementing deployment experience on Render and Vercel.

PROJECTS

Price Prediction for Agriculture Commodities | Python, Flask, scikit-learn, LSTM, HTML/CSS/JS **2025 | Team of 3**

- Built an ML system forecasting prices of key crops (rice, wheat, onion) from 50,000+ Agmarknet data entries, achieving 92% accuracy with LSTM.
- Tested prediction API endpoints with Postman; validated model accuracy across datasets and dashboard consistency across browsers.
- Developed a Flask backend API serving predictions, integrated with an HTML/CSS/JS dashboard for interactive data visualisation.

WhatsApp Health Chat Bot - Prakalp-Swasthya | Python, Flask, Twilio API, Gunicorn, Render, JSON **2025 | Solo**

- Engineered a bilingual (Hindi and English) WhatsApp healthcare assistant for symptom triage and emergency detection, with JSON-based location-specific clinic discovery.
- Integrated Twilio webhooks for real-time messaging and deployed on Render with Gunicorn for reliable production uptime.

InsightGrid - Full-Stack Resource Platform | Python, FastAPI, JavaScript, Bootstrap 5, JWT, Google OAuth, Vercel, Render **2026 | Solo**

- Designed and deployed a decoupled platform for sharing educational resources, with JWT and Google OAuth 2.0 authentication and a role-based access control (RBAC) admin dashboard for moderation.
- Performed manual functional and API testing (Postman) across authentication, RBAC, and resource flows before each release; tracked bugs by severity using GitHub Issues.
- Hosted frontend on Vercel and backend on Render, configuring strict CORS middleware for secure client-server communication.

ACHIEVEMENTS & CERTIFICATIONS

- AWS & Cloud Computing Certificate of Completion (GRAStech, 2026): 90-hour project-based training, ISO 9001:2015 certified program.
- TechExpo 2026: Selected to showcase agricultural ML price-prediction model to academic and industry peers.
- CodeRush 2.0 Hackathon: Participant, building full-stack / ML solutions under time constraints.
- HackerRank: Earned SQL (Basic) and Python certifications.
